

## 1. CURRENT STATUS SUMMARY

As required in Title 40, Code of Federal Regulations, Part 257.90, this section provides an overview of the current status of the groundwater monitoring and corrective action program for

All monitor wells are screened within the uppermost groundwater bearing unit (GWBU) in the vicinity of the EP. The uppermost GWBU is ap

#### 4.2.1 Descriptive Statistics

Descriptive statistics were calculated for the upgradient wells and analytes at the site (Appendix B, Table 2). The descriptive statistics highlight a number of relevant characteristics

#### 4.3 ESTABLISHING UPPER PREDICTION LIMITS

A multi-part assessment of the monitoring wells was performed to determine what type of upper prediction limit (UPL) to calculate as a compliance point. A decision framework was

### Potential Exceedances

Analyte	Well	LPL	UPL	Sample Date	Value	Unit
Fluoride	JKS-36	–	0.252	2022-10-25	1.73	mg/L
Fluoride	JKS-64	–	0.252	2022-10-26	0.383	mg/L
pH	JKS-36	4.94	6.51	2022-10-25	4.41	SU
pH	JKS-61	4.94	6.51	2022-10-25	7.1	SU

Initial exceedances of the UPL may be confirmed with re-testing of the downgradient wells per the 1-of-2 retesting scheme. If the initial exceedance is confirmed with re-testing results in the same well, the well-analyte pair will be declared a statistically significant increase (SSI) above background. If an SSI is found, a notification or alternate source demonstration will be prepared

## Tables

Sampling Event	Sampling Event Dates	TOC Elevation Depth to Water (feet btoc )	513.63 Water Level (msl)	TOC Elevation Depth to Water	526.86	TOC Elevation	522.27	TOC Elevation	507.84
----------------	----------------------	---	--------------------------------	---------------------------------	--------	---------------	--------	---------------	--------
